

PRODUCT INFORMATION**DIAPHRAGM SEALS WITH 1" THROUGH 3"
FLAT-FACED FLANGED INLETS**

Although standard flanged inlet seals (Types 102/302 and 103/303) can be attached to a flat-faced mating flange, the resulting joint is not acceptable if the customer is using lined (glass, rubber, Teflon, etc.) pipe. For such applications, a full flat-faced flange is required.

Because a full flat-faced flange requires a complete new lower housing, we have placed the pricing of all ½" through 3" seals with flat-faced flanged inlets on application.
