The Quick-Select Pressure Module
Quick-Select pressure modules are available in full-scale ranges from 0.25 inches H₂O through 10,000 psi. Gauge, vacuum, absolute, differential or compound pressure ranges are available. Each base unit can accommodate two pressure sensor modules simultaneously. Select from multiple modules which can be interchanged in seconds without the use of tools. When installed in the base unit, a pressure module becomes an integral part of the measurement system, thereby protecting the sensor from damage. Any combination of Quick-Select pressure modules may be used or interchanged as needed in the lab or field.

The AQS-1 Module
The AQS-1 Quick-Select low pressure module is based on a proprietary, Ashcroft engineered, variable-capacitance sensor. This sensor is available in ranges from 0/0.25 to 0/200 inches H₂O. AQS-1 Quick-Select pressure modules are available in accuracies from ±0.1% to ±0.06% of span. These Quick-Select pressure modules are available for gauge, differential and compound measurement requirements.

The variable-capacitance sensing element in the AQS-1 incorporates a micro-machined silicon diaphragm. Silicon provides optimum repeatability with minimal hysteresis. The sensor is extremely stable, since the sputtered metal capacitance plates are molecularly bonded to the silicon. This design allows for the elimination of epoxies and other types of bonding and adhesive agents from the sensor assembly.

The AQS-1 sensor is also extremely rugged. It can withstand extreme overpressure without significant error or calibration offset. In addition, the sensor is capable of withstanding significant shock and vibration without damage or loss of measurement output integrity.

The AQS-2 Module
The AQS-2 Quick-Select pressure module incorporates a piezoresistive, micro-machined silicon sensor. These sensors are available in ranges from 0/100 inches H₂O through 0/10,000 psi and are also offered in gauge, absolute, vacuum and
compound variants.
316 SS sensor isolation is provided on all AQS-2 modules. AQS-2 Quick-Select pressure modules are available in a variety of accuracies from ±0.1% of span through ±0.025% of span.

Also Measure Temperature
The AQS-RT1, AQS-RT2 and AQS-TC1 interface modules allow the ATE-100 to measure temperature with common RTD or thermocouple temperature measurement devices.

The Base Units
The base unit provides access to the complete capabilities of the ATE-100 calibration system. These capabilities extend far beyond those of precision pressure measurement. The base unit contains a wide variety of application-specific firmware as well as the ability to measure both current and voltage inputs. In addition, this unit has the ability to interface the system with a computer, data acquisition system or dumb terminal via the standard RS-232 interface.

Each base unit can accommodate two Quick-Select pressure modules simultaneously. In addition, the modules can be interchanged quickly and easily for on-the-fly system configuration as application requirements change.
