

S50 Industrial RTDs & Thermocouples with NPT Connections

TYPICAL USES

- Industrial process, petrochemical, oil and gas applications
- Process temperature measurements for oil, gas and power generation systems
- Process control, monitoring asset protection
- General purpose or hazardous area
- Available with DIN mounting plate or spring loaded fitting designs

DESCRIPTION

Ashcroft® S50 temperature sensor assemblies provide accurate temperature measurements. Each temperature sensor assembly consists of a spring-loaded temperature sensor, magnesium oxide (MgO), insulated insert, connection head and lag extension. The assembly may also include an optional terminal block and/or transmitters.

Thermocouple assemblies are manufactured to IEC 60584-2 or ASTM E230 and RTDs assemblies are manufactured to IEC 60751.

SPECIFICATIONS					
Ashcroft Series:	S50				
Sheath Diameter:	1/8", 3/16", 1/4", 3 mm, 4.5 mm, 6 mm, 8 mm				
Stem Length:	Minimum: 50 mm/2 in Maximum: 3 m/120 in				
Sensor Type & Measuring Range	RTDs Platinum 385 Pt 100 -196 to 600 °C Pt 1000 -40 to 600 °C Thermocouples* Type J -40 to 750 °C Type E -200 to 800 °C Type K -200 to 1200 °C Type N 0 to 1200 °C Type T -200 to 350 °C				
Wiring Configuration:	RTDs - single or dual 2 Wire 3 Wire 4 Wire Thermocouples - single or dual				
Accuracy Class	RTDs - (IEC 60751) Class A: $\pm (0.15 + 0.0020 * ltl^{(1)})$ Class B: $\pm (0.30 + 0.0050 * ltl^{(1)})$ Class AA:				

^{*} Consult factory for design configurations needed for using thermocouples in high temperatures

KEY BENEFITS

- Industrial process applications.
- Designs for hazardous locations.

Thermocouples (ASTM E230)

	Type J	Туре К	Туре Е	Type N	Type T

DIN Mounting Plate Design

Spring-loaded Mounting Design

HOW TO ORDER S50 TEMPERATURE PROBES:

- The ordering code is built by selecting the appropriate configuration for the various sections.
- The insert nominal length LN is measured from base of the head to the tip of the probe.
- The lag extension length N is measured from the base of the head to the center of the threads on the lag extension.
- LN can be calculated by adding the lag extension length N to the probe insertion length L.
- The N length and the LN length are added to the end of the ordering code in millimeters.
- To convert inches to millimeters multiply by 25.4. mm = inches x 25.4

d = Stem diameter

N = Lag extension length

L = Insertion length

LN = Insert nominal length

LN = N + L
